

MATH 110 (Gwinn-Edwards) Section #05
Fall 2008 Final
December 12, 2008

Show all your work for full credit.

#1 Given the polynomial $f(x) = 2x^4 - 3x^3 - 12x^2 + 7x + 6$

(a) Use Descartes Rule of Signs to determine the number of possible positive real, negative real, and nonreal complex zeros of $f(x)$. (The following table is provided for you to show your answer)

| | | | | |
|-------------------------|--|--|--|--|
| # positive real zeros | | | | |
| # negative real zeros | | | | |
| # nonreal complex zeros | | | | |
| Total # of zeros | | | | |

(b) Use the Theorem of Rational Zeros to find all the zeros of $f(x)$. If you need extra room please work on the back of the previous page.

List all the possible zeros of $f(x)$: _____

List the actual zeros of $f(x)$: { _____ }

#2 Graph the function $f(x) = x^2(x-3)(x-1)(x+3)$

The following table is provided for your convenience.

| | | | | | |
|-----------|--|--|--|--|--|
| Intervals | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| | | | | | |
| f(x) | | | | | |

#3 Sketch the graph of $f(x) = \frac{x-2}{x^2-2x-3}$.

a) Find the x-intercept.

b) Find the vertical asymptotes.

The x-intercept is (, 0).

The vertical asymptotes are $x = \underline{\hspace{2cm}}$ and $x = \underline{\hspace{2cm}}$

c) Find the y-intercept.

d) Find the horizontal asymptote.

The y-intercept is (0,).

The horizontal asymptote is $y = \underline{\hspace{2cm}}$.

e) Does the horizontal asymptote cross the graph of f ? If so, write the coordinates of this point.

f) Sketch the function on the graph below. Be sure to label your points on the graph, and find $f(x)$ for at least one value of x in each interval of the domain.

#4 Sketch the graph of $f(x) = \frac{x^2 - 2x - 8}{x^2 + x - 6}$.

a) Find the x-intercept.

b) Find the vertical asymptotes.

The x-intercept is (, 0).

The vertical asymptotes are $x = \underline{\hspace{1cm}}$ and $x = \underline{\hspace{1cm}}$

c) Find the y-intercept.

d) Find the horizontal asymptote.

The y-intercept is (0,).

The horizontal asymptote is $y = \underline{\hspace{1cm}}$.

e) Does the horizontal asymptote cross the graph of f ? If so, write the coordinates of this point.

f) Sketch the function on the graph below. Be sure to label your points on the graph, and find $f(x)$ for at least one value of x in each interval of the domain.

#5 What is the domain, D, of $f(x) = \frac{\sqrt{2x+3}}{x^2+x-6}$? (be sure to write the domain in interval notation).

Condition 1:

Condition 2:

Graph the domain on the number line.

D = _____

#6 Find the inverse function of $f(x) = \frac{2x-5}{3x+1}$. Assume f is one-to-one. Show that $f(f^{-1}(x)) = x$ and $f^{-1}(f(x)) = x$.

#7 Express $f(x) = 3x^2 - 12x + 17$ in the form $f(x) = a(x - h)^2 + k$ using both the complete the square method and the theorem for locating the vertex of a parabola.

#8 (a) Use the quadratic equation to find the zeros of f , (b) find the maximum or minimum value of $f(x)$, and (c) sketch the graph of f . (label your x -axis and y -axis intercepts and your vertex coordinates).

$$f(x) = 2x^2 - 8x + 5$$

(a) Zeros of f :

(b) Minimum or Maximum value of f :

(c) Sketch the parabola.

Write coordinates of x -intercepts _____, y -intercept _____, Vertex _____

#9 (a) Sketch the approximate graph of $f(x)=e^x$ by first dashing in graphs of two other exponential functions that the final graph will fall between. (label the final graph clearly)

(b) On the same graph sketch $g(x)=e^{x-3}$ (label the horizontal asymptote).

(c) Also on the same graph sketch $h(x)=-e^x-2$
